

LECKEY DESIGN

DEVELOPING INNOVATION ONE STEP AT A TIME

Leckey Design are product pioneers in research and development. From its establishment over 35 years ago, Leckey has grown into a multi-award-winning manufacturer that is globally recognised in providing supportive products for individuals and families that require assistance for mobility.

With over 40 years experience, Crossen Engineering's in-house facilities provide expertise solutions in design, toolmaking and injection moulding.

HOW CROSSEN ENGINEERING HELPED

The Crossen Engineering team began working with Leckey Design during the design phase of their MyWay Walker project. The team assisted Leckey on DFM analysis and part optimisation - which is a process that helps limit the amount of adjustment required during the tool manufacture.

With Crossen Engineering being a “**single-source solution**”, it enabled the team to assist Leckey in the design and production of mouldings that provided the postural support that was required for their mobility equipment.

A WORD FROM LECKEY DESIGN

“Crossen Engineering worked closely with us during the sampling process to ensure the parts were to our satisfaction, responding quickly to amendments or adjustment requests. We now regularly use Crossen Engineering in our projects”.

Project Design Lead.
